"The only way to do mathematics is to do mathematics"

-Paul Halmos

Maths is all about being a creative thinker and not a calculator and this is the brilliance that our participants displayed during the PRELIMINARY ROUND: VEDIC MATHS.

The event began with a lot of enthusiasm among the participants as well as the spectators. The event's goal was to test students knowledge of Vedic maths and mental arithmetic. Additionally, it helped them overcome their fear of maths and connected them to India's rich cultural heritage, which increased their interest in the subject. Mathematical operations such as addition, subtraction, multiplication and division were used as the basis for a variety of computations carried out by Cecilians in grades IX and X. The event turned out to be an insightful learning experience for all the participants. To encourage by young learners, the selected students will show their magical calculations to the students of grades VI-VIII.

The easiest approach to becoming familiar with Vedic Maths is to dive in and experience the excitement of studying computations.
