Maths Friday Activity

Topic: Multiplication

Class: III

Report

Date: 04.8.25

Organizer: Maths Club (Primary wing)

Title: Learning Multiplication using bindi

Objective: - To generate significant interest and excitement among students for the mathematical concept of multiplication..

Topic:-

The third-grade students recently performed an engaging Multiplication activity, where they learned the concept of multiplication using bindi pasting. The activity was aimed at making learning multiplication fun and interactive.

Under the guidance of their teacher, the students actively participated in making horizontal and vertical lines and affixing bindis at each point. This hands-on approach allowed the students to grasp the concept of Multiplication.

Through this activity, students understood the concept of multiplication as repeated addition and also developed problem-solving skills and hand-eye coordination. Notably, the activity was designed not only to reinforce mathematical understanding but also to foster the development of cognitive and psychomotor skills in the students.

The activity was a huge success, making learning multiplication an enjoyable experience for the students. The use of bindis added a creative touch, helping students visualize and grasp the concept effectively.
