

St. Cecilia's Public School
Scientia Club Activity
Event: "TOD FOD JOD"
Date: 19 th April 2025
Grades: VI-VIII

The Scientia Club of our School hosted an engaging and insightful science activity centered around the "Tod Fod Jod" concept for students of (Classes VI-VIII). This hands-on approach aimed to foster a deeper understanding of scientific principles by encouraging students to explore the inner workings of everyday objects through deconstruction, analysis, and reconstruction, or by creatively repurposing the components.

The "Tod Fod Jod" science activity proved to be a highly successful and enriching experience for the students. It provided a dynamic and engaging platform for them to learn scientific concepts through direct interaction with real objects. The hands-on approach not only deepened their understanding but also sparked their curiosity and fostered a spirit of innovation. We believe that such activities are crucial in making science education more relevant, exciting, and impactful for our students.
